

### Challenges:

1. So far, the most important challenge that I faced in the assignment 2 is that the multilabel dice and jaccard is coming wrongly everytime for me. I think I was unable to find the bug in my code to correct it.
2. Second is the overlaying the prediction image I really find it hard to overlay it properly though I tried to do it.
3. The challenge was specifically interesting to do the multiclass segmentation. Since I do not have much background in the segmentation task.
4. The task was getting complicated somewhere when there was night situation. It was coming wrongly while I tested one of the results.
5. Many a times I also find that the predicted images were coming as black, while the loss and the accuracy was correctly coming.
